Jean Rousseau – County Administrative Officer

It is my pleasure to submit the 2012 Tulare County Annual Crop and Livestock Report. The report is produced in accordance with Sections 2272 and 2279 of the California Food and Agricultural Code, and summarizes the acreage, production, and value of Tulare County's agricultural commodities. The figures contained herein represent gross returns to the producer, and do not reflect actual net profit.

Tulare County's total gross production value for 2012 is **\$6,210,693,000**. This represents an increase of \$581,297,000, or 10% above 2011's value of \$5,629,396,000.

Milk continues to be the leading agricultural commodity in Tulare County; with a total gross value of \$1,813,816,000, a decrease of 12%. Milk represents 29% of the total crop and livestock value for 2012. Total milk production in Tulare County remained relatively stable. Livestock and Poultry's gross value of \$660,661,000 represents an increase of 5.8% above 2011, mostly due to an increase in value for Turkeys, Cattle, and Calves.

Fruit and Nut commodities were valued at \$2,835,406,000, representing an increase of 29%. The majority of this gain was a result of an excellent year for our grape category. The total value of all Field Crops was \$765,840,000, an increase of 24% from the previous year. Local demand for dairy feed continues to maintain high values for our field crops. Nursery Products were valued at \$67,370,000 representing an increase of 2.5% from 2011. This minor increase is a reflection of the continuing uncertainties in both the housing and agricultural markets. Vegetable Crops were valued at \$19,700,000 in 2012, representing a less than 1% increase. Harvested vegetable acreage continues to decline in the county.

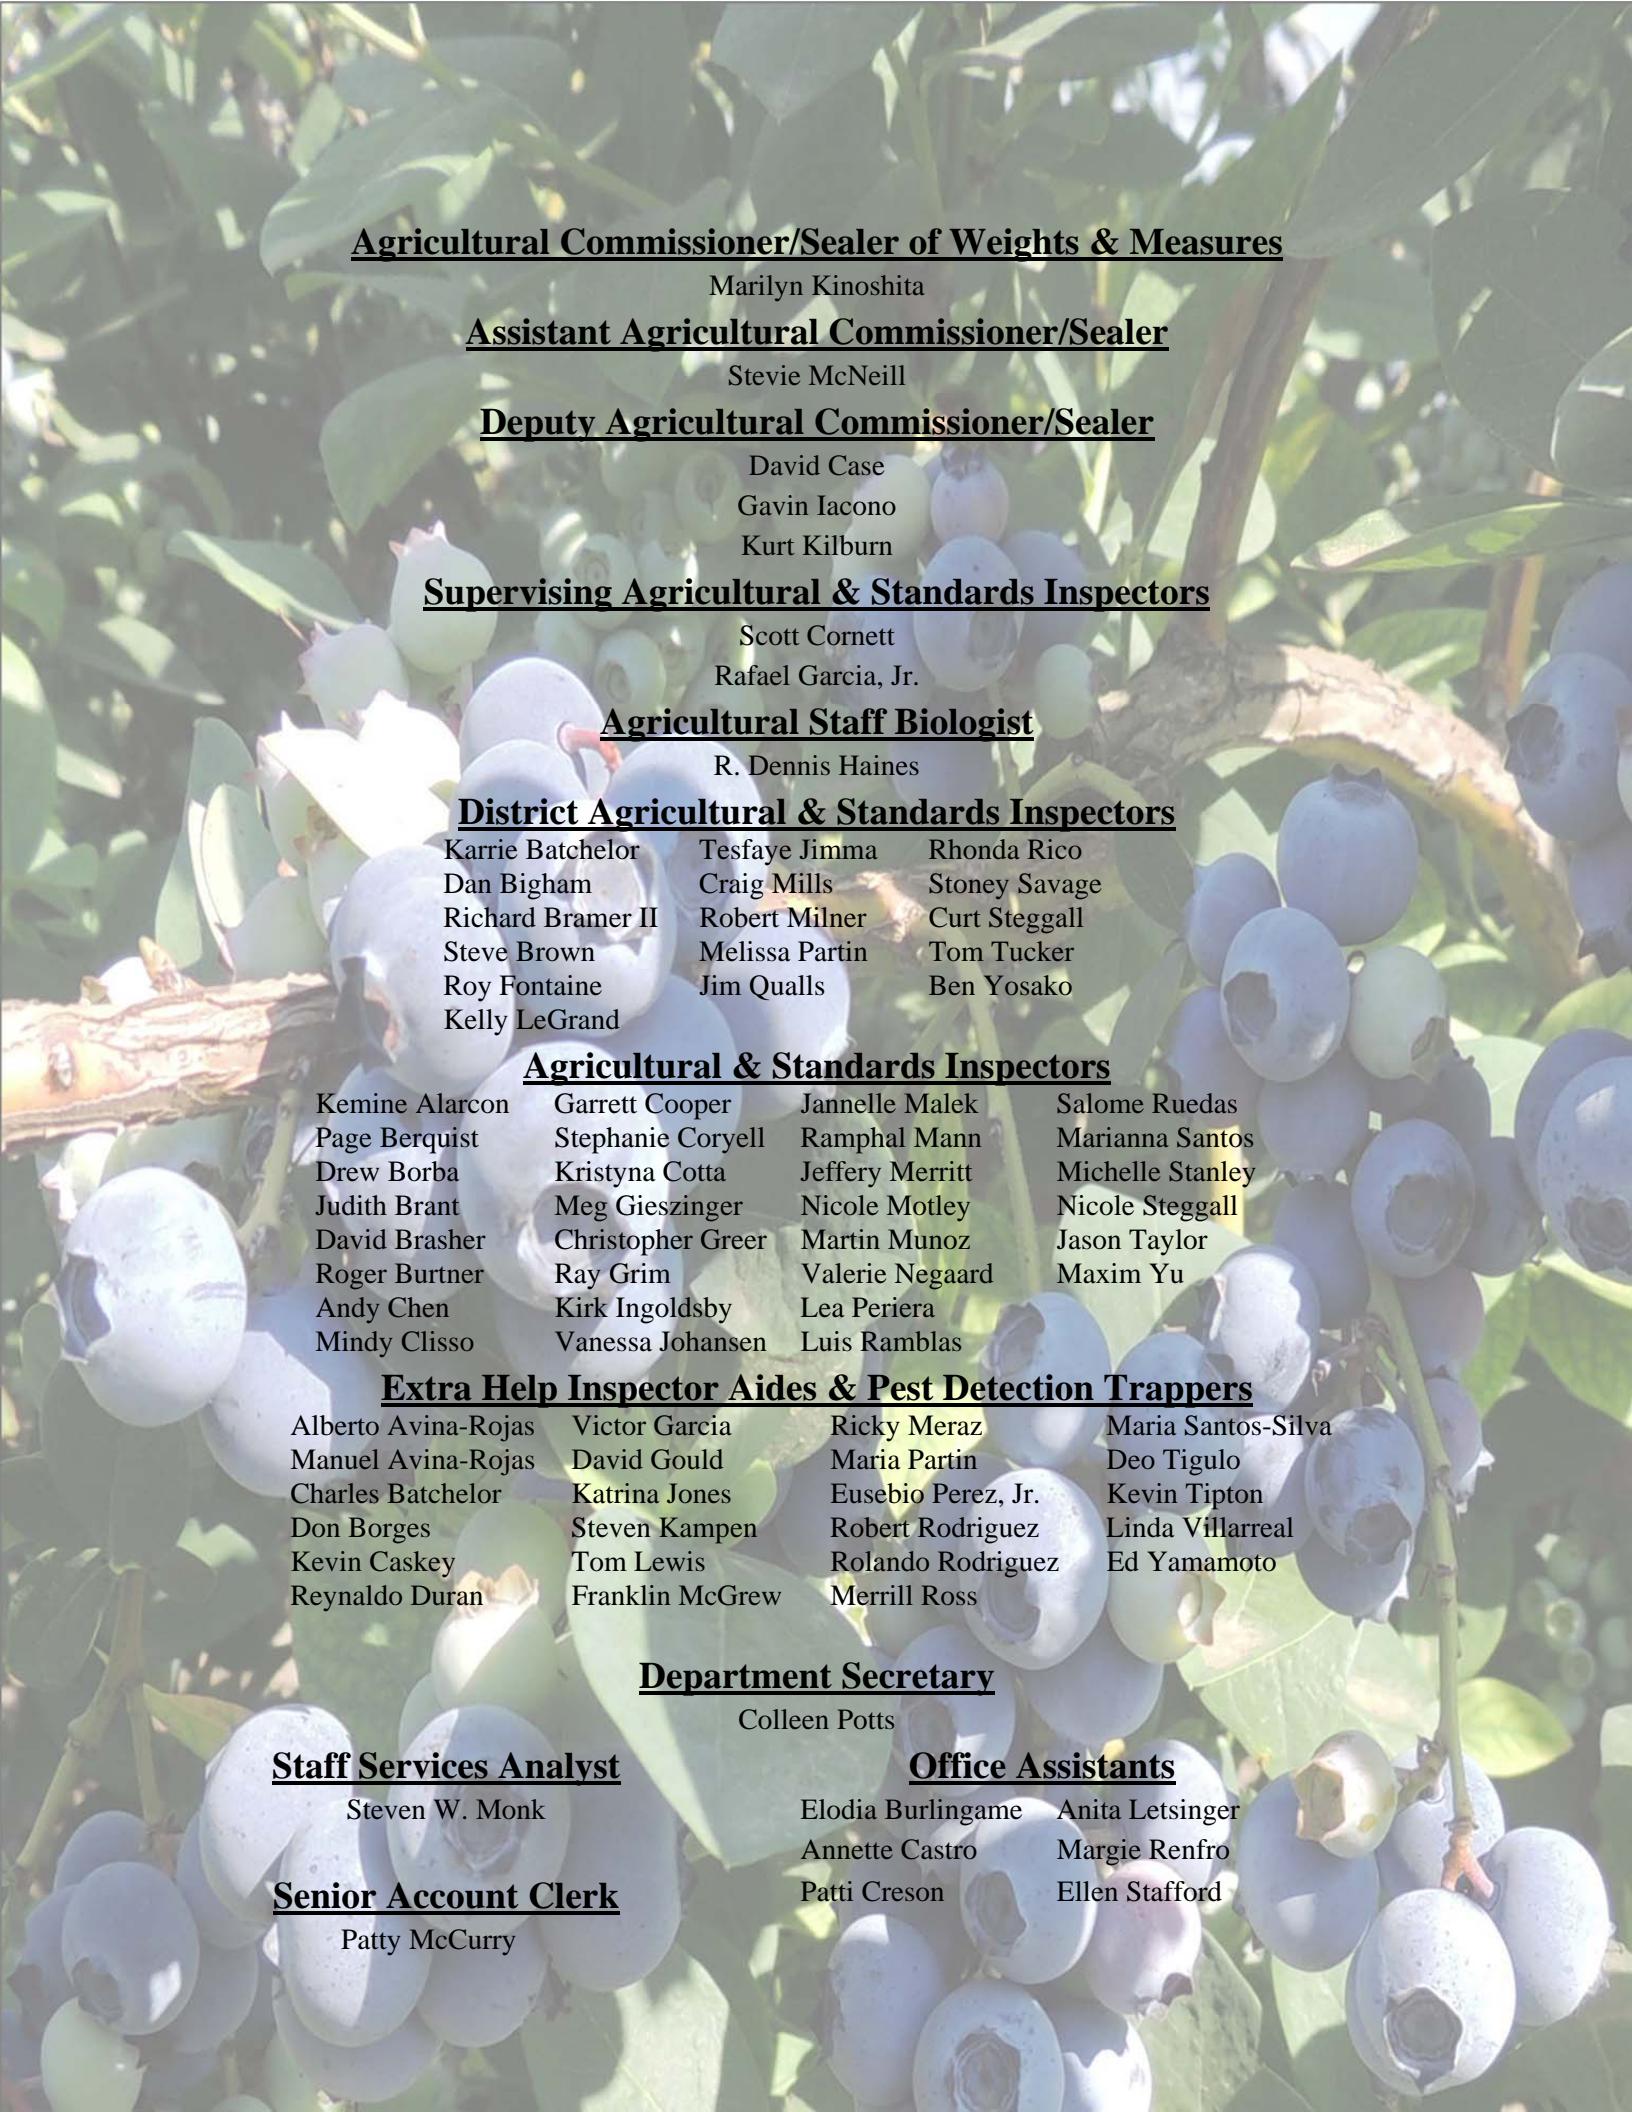

Tulare County's agricultural strength is based on the diversity of the crops produced. The 2012 report covers more than 120 different commodities, forty-three of which have a gross value in excess of \$1,000,000. Although individual commodities may experience difficulties from year to year, Tulare County continues to produce high-quality crops that provide food and fiber to more than 84 countries throughout the world.

I wish to express my sincere appreciation to the many producers, processors, and agencies, both private and public, who supported our efforts in producing this report. I would also like to thank all the members of my staff, particularly Lea Pereira, Jacqui Balderas, and Dennis Haines. Without their hard work and valuable input, the publication of this report would not have been possible.

Respectfully submitted,

A handwritten signature in black ink that reads "Marilyn Kinoshita".

An overall increase of \$149,942,000 was seen in Field Crops from 2011 to 2012. This 24% increase is mainly due to the large jump in harvested acreage for alfalfa, dry beans, plus both corn and wheat for grain. There was also an increase in production per acre in nearly every field crop listed, as well as an increase in value per unit for the silage crops.

2012 Fruit & Nut crops saw a sharp increase of 29% in the total value, or \$633,822,000. Grape production and price were extremely high in 2012, which contributed to more than half of the total increase. Almonds and pomegranates both experienced an increase in value per unit. Most stone fruit crops also saw a price increase in 2012, partially due to crop damage from spring hail storms.

There was a slight increase of \$194,000 in the total value of vegetable crops, a change of just less than 1%. The total harvested acreage decreased slightly, however an increase in the price per unit is the main cause for the increased overall value.
